Buy now : Click  button in setting panel, to buy our software.

Previewing Files

Xlinksoft iPhone Video Converter 

After importing the videos, you can preview the video in the preview pane on the right of the main interface. It works as a common player. The name of the video being previewed will be shown on the top of the preview pane automatically.

:Click the button, play the selected the file.

:Click the button, stop the selected the file.

settings

Click the setting button tings panel,to set your video files parameters.

A screenshot of the 'Conversion Setting' dialog box. It is divided into three main sections: Video Setting, Audio Setting, and Output file setting. The Video Setting section includes dropdown menus for Code Type (MPEG-4 Coding programme), Video Ratio (29.97 frame/second), and Code quality (Nomal). It also has checkboxes for 'Keep Original Dimension' (unchecked) and 'Customized' (checked), with input fields for Width (720) and Height (306). The Audio Setting section includes dropdown menus for Code Type (MPEG4 AAC format), Audio Type (128 kilobit/second), Audio Channel (Mono), Audio Sampling (44100HZ), and Code Quality (Default Setting). The Output file setting section includes a File Extension field (mp4), checkboxes for 'The Same Name With Source File' (checked) and 'Formatting File Name' (unchecked), and input fields for Prepositive and Figure Digit. At the bottom, there are three buttons: 'Currently save', 'Permanence save', and 'Cancel'.

Video Code Type : Setting the type of video coding. Aiming at different conversion types, we have pre-set the coding types as default. We strongly suggest that do not change the settings, otherwise it probably leads to a failure for converting the files.

Video Ratio : Setting video encoding bit rate, the general rate of high and low settings will affect the quality of the video output, but affect the quality of the video output of many factors, so just to improve the quality of the code can not continue to improve the video The quality of output, at the same time, when you raise the quality of the video encoding, the output file size will also increase. Some of the compatibility of the machine is not high on the high bit-rate encoded documents in

support of the media is not very good.

Video Code Quality : you can choose your video encoding quality, the higher the quality, the greater the output file.

Video Size : If you need a specific size, check the custom size, width and height at the same time in the edit box Enter your desired size of the video.

Audio Code type : Setting the type of audio encoding, for different types of conversion, we have a preset audio encoding type, not the proposed changes, or could lead to failure of the document conversion.

Audio Ratio : Setting your bit-rate audio coding, video coding methods and set up a similar rate, please refer to the video ratio settings.

Audio Channels : settings of the audio channels.

Audio Simpling : The audio Simpling rate settings. Audio sampling rate determines the audio quality of the code, increasing the sampling rate can improve the quality of audio output, but at the same time increase the output file size, audio sample rate increase at the same time, proposals are also audio bit-rate increase, you can Audio bit-rate audio sampling rate for the understanding of the carrier, audio sampling rate of audio bit rate again within the framework of the activities, so that when you set up a large audio sample rate and audio bit rate will be set very low, it is not up to To the high quality of effects of the output. We have software for each format has been configured to set a more reasonable, we recommend that you do not need to carry out non-specific changes.

Audio Code Quality : you can choose your audio encoding quality, the higher the quality, the greater the output file.

File Extension : you can set up after the conversion output file extension.

Output File Name : You can choose with the same source file, the file name or format. When you select the source files at the same time, the output file name of the source file with the same name. When you select output file format, the output file you will be automatically set by the law of a certain name, when you play media devices require media files must be named in accordance with certain rules, you can choose this, choose the later, the former Chi-digit string of characters and edit box will be activated, you can set up your equipment requirements. For example, equipment you need to be in line with the file name TEMP0000.AVI, four of them after 0000 for the automatic naming of the figures, and for the TEMP fixed prefix, you can pre-enter the string TEMP enter 4-digit number, Well, all this set up after the conversion of the document will automatically be named TEMPxxxx naming format.

Currently Save : If you set this into the window, the main dialog box to select one or more tasks,

then this will activate the button, click  button, you will only be used for the setting of your selected tasks. If you set this into the window, the main dialog box did not choose any document, and this button will be disabled.

Permanence Save : Click  button will be set up to save settings file, open the next, this is still set for the results, if you enter in this window settings, the main dialog box to select one or more tasks, When you click on this button, the settings will be applied to the selected tasks.

Cancel : Click  button , to not save .

Edit file list

When the program is launched at the first time, there is a guide for getting started for your references. The guide will show up, If the file list has been cleared. Load videos by clicking on the "Add" button, and then you can change the conversion priority. There are five columns on the file list:Source file,Media time,Conversion type,Output file

Source File	Media Time	Conversion Type	Output File
test1.asf	00:01:41	iPhone MP4(480P) Video ...	test1.mp4
test1.avi	00:00:10	iPhone MP4(480P) Video ...	test1.mp4
test1.wmv	00:00:13	iPhone MP4(480P) Video ...	test1.mp4
test10.asf	00:00:13	iPhone MP4(480P) Video ...	test10.mp4

Below the table is a control bar with four buttons: a green plus sign labeled "Add", a red X labeled "Delete", a blue trash can labeled "Clear", and a blue scissors labeled "Edit".

Source file : The file name of the source file with extension.

Media time : The file time of the source file with length.

Conversion type : Convert to needed output format .

Conversion type : Output the file name.

Edit Video

Xlinksoft iPhone Video Converter
